

SAT 101 Speaking Assessment Guide

This is a general guide for information purposes only. The official task sheet will be released in week 9

Assignment:

Give a presentation about the AI application designed on the module and answer follow-up questions

Time: Semester 1 Week 13; PPT submission: Monday, Week 12

Assessment Details

Assessment Type: Group presentation and Q and A. Individual grading.

Percentage of module mark: 20 %

Learning Outcomes assessed: A, B, D, E, F

Duration: 5 minutes for the presentation, up to 10 minutes for the questions, 15 minutes in total

Assessment Task

Part 1 (5 minutes)

Give a presentation on the App development project from your module. Your presentation should include all of the following elements:

- Use 1–2 slides maximum per speaker (total 5–8 slides).
- Cover 5 main sections from suggested outline: Introduction, Problem & Solution, Operating Principles, Technical Development & Roles, Summary- Future Directions- Implications
- Keep visuals clear and minimal; rely on graphics over text.
- Include at least 5 citations and reference list in IEEE format
- Speak in English, (part 1 is not assessed for language quality).

Part 2 (10 minutes)

Your group must answer in detail at least 3 follow-up questions from the examiner. These questions will cover:

- The contents of your presentation including any areas that were unclear or that could be developed further.
- The way you approached this project including how you researched it, how you wrote the report and how you planned and practised your presentation.

Further details

- This task is one part of your module-long assessments along with the writing and other components. For information about the other work you need to do for the module , please see the assessment Task sheets
- You must upload a PowerPoint by 23:59 Monday in W12. If you miss the deadline, you will have to give your presentation without a PPT. You will not be allowed to bring the PPT to the exam and your grade may be affected.
- You must show your student ID card to your examiner in the exam. If photographs, names or ID numbers are no longer clear on your identification, you may be refused admission to the exam.
- You must not read from a script or from notes during your presentation. You may refer to your PPT for information, but not read directly from it.
- If you are late, you will not be allowed to take the exam. Your speaking assessment cannot be rescheduled if you are absent or late.
- If you miss your speaking assessment, you may be able to apply for mitigating circumstances. Please see 'Section C: Further Information' in the module handbook for details on Learning Mall.
- For information about how your assessments are marked, please refer to the descriptor on page 3.

Advice

• Information about the design, structure, content and skills necessary for a good presentation will be given in class. It is important that you attend your classes and carefully study the resources provided on the module LMO page.

• You should aim to make your presentation understandable to a non-specialist audience. This may involve defining or explaining some technical terms if necessary, and not assuming your audience already knows a lot about the technology.

• Timing in your presentation is very important and you should aim to try to finish all elements of the presentation within the given time. It is important to practice your presentation by paying special attention to timing.

• Remember to use your PPT when giving your presentation and to draw the examiner's attention to the relevant sections.

• You will be asked follow-up questions in part 2. It is important therefore that you reflect on the work you have done during the whole module and the process of writing your report and designing your app and presentations. This means that you need to think about which parts you did well and which you did poorly, and consider how these could be improved in the future. You might be asked to explain the following:

1. Your choice of App, how it was developed and any technical difficulties faced
2. The process of working as a team
3. The process of researching and writing the report
4. The content of the course and your prior knowledge of AI
5. Any ethical concerns raised by the project and AI in general
6. Academic conventions and integrity policy on the module

• Remember to give detailed answers to any questions you are asked in the exam. Aim to speak for at least one minute for each question.

• You can answer any of the questions but should also allow the other members of your group to speak, as you will be graded individually.

• If you have more to say, you can keep talking for longer. The examiner will stop you when they want to move onto the next question.

Grading Criteria

Presentation (Part 1)	Content (Part 2)	Participation and Fluency	Grammar and Vocabulary	Pronunciation
-----------------------	---------------------	---------------------------	---------------------------	---------------
