

Group Project: Purpose, Scope, and Expectations

SAT101 AI Application Design

Purpose

The group project is a key component of this module, designed to deepen your understanding of AI application design and to develop essential skills in teamwork, innovation, and communication. It challenges you to think critically, act creatively, and work collaboratively, preparing you for future academic and professional success in the rapidly evolving field of AI.

Scope

The group project requires you to design a conceptual plan for an AI-powered application that addresses a specific real-world problem, use case, or business idea. The scope of the project includes:

1. Clear and creative conceptual idea development
2. Strong technical understanding and application, with a focus on AI integration
3. Comprehensive project planning and design
4. Risk and ethical analysis
5. Evaluation plan
6. Societal impact analysis
7. Effective communication and presentation
8. Evidence of teamwork and collaboration

Expectations

We expect you to deliver a well-researched, thoughtfully designed, innovative ideas, and professionally presented group project that demonstrates both technical competence and critical thinking. Your project should reflect a deep understanding of AI application design, ethical considerations, technology choice, and user-centered principles, while also showcasing strong communication and teamwork skills. The group project is a culmination of your learning in SAT101 and a demonstration of your readiness to apply AI concepts in real-world scenarios.

Additional Notes

- You are not required to write code to implement your idea. While implementing a prototype of your idea would undoubtedly be impressive, especially during your group presentation, it will not result in additional marks being awarded for that implementation.
- The content in your group report should not duplicate the content presented in your individual portfolios.
- Detailed project requirements will be made available once the group formation process has been completed. Refer to the Module Handbook for important dates.
